1914 NEW CROP 1914

49th Summer and Fall Catalogue and Price List

HIGH GRADE SEEDS
READY FOR DISTRIBUTION

This is only a small portion of the Varieties of Seeds we handle. Catalog for full list on application

J. STECKLER SEED CO., Ltd.

ESTABLISHED 1865

LARGEST SEED HOUSE IN THE SOUTH

512 to 516 Gravier Street NEW ORLEANS, LA.

Vegetable Plants in Season, Flowering Plants and Shrubs.

ANNOUNCEMENT.

In presenting to our many friends and customers our Forty-Ninth Summer and Fall catalogue, we want to state that our aim is to furnish at all times SEEDS OF QUALITY. We feel that a house that has been established since 1865, with a record of over 25,000 live accounts, proves without a doubt that we have been pleasing our customers in all parts of the world.

This list comprises only a small part of the many articles that we handle, and for a complete list, we shall thank you to apply for our mammoth 180 page catalogue, which we send free on application.

Due to the various changes in our Southern country, we feel that many will turn to diversification of crops and stock raising, hence, we advise the planting of feed stuffs of all kinds.

We are ready at all times to answer any and all inquiries in all languages.

We feel that this year our friends cannot go wrong by planting Fall Irish Potatoes, which are planted in August. Onion Seed, Creole, Bermuda and all varieties listed, planted from the 15th of September to the latter part of October with the best success; also Turnip, Cauliflower and Cabbage, for instance, this year the Cabbage crop was enormous and prices were very poor. Due to that fact, those who got small prices this year will not plant, therefore, we advise the planting of a large crop of Cabbage.

We are ready to give any assistance to our customers, and if the personal advice of the firm is needed and the distance is not too great, we are ready to assist in that way.

Those who have proper shipping facilities should plant Big Boston, Trocadero, Frotscher's Improved Large Passion, Steckler's White Winter and White Paris Coss Lettuce. As a rule Lettuce is a paying crop.

Escarolle, Endive, Radish, Carrots, Beets, Beans, Peas, Parsley, Leeks, Turnips, Cauliflower, Mustard, Spinach, Shallots, Irish Potatoes, Tomatoes, Eggplant, Creole and Bermuda Onion Sets should also be planted.

Our seeds are all tested by our Grower before being shipped to us, and immediately upon their arrival here they are tested in the Standard Seed Tester and in the ground, thereby assuring perfect germination. It is to our interest to sell the very best seed. We are in the business to stay and are in the business nearly fifty years, which is proof of itself of our faithfulness in selling the very best seed obtainable.

Our facilities are without doubt the very best in the South, and coupled with our many years of experience, afford us the opportunity to get the very best that is grown.

The above are facts, and while we could write pages of proofs of our method of doing business, it is useless for us to burden you with lengthy write-ups when a trial order will convince you and let us prove it for yourself.

J. STECKLER SEED CO., LTD.

July 15th, 1914.

Steckler's List of American Grown Cabbage Seed

THE MOST RELIABLE CABBAGE EVER RAISED

Absolutely Perfect in Every Respect for Either Summer, Fall or Winter Use

Stein's Early Flat Dutch.

STEIN'S EARLY FLAT DUTCH CABBAGE.

This is one of the earliest cabbages for its size. The demand for the seed has steadily increased since it was introduced. It is a sure header, very regular and well adapted for shipping. Is planted exclusive of all other kinds by some of the largest cabbage growers.

FROTSCHER'S SUPERIOR LARGE LATE FLAT DUTCH CABBAGE.

This is the most popular variety for winter cabbage, and cultivated by almost every gardener who plants for the New Orleans market. Heads are large and solid, often weighing from 15 to 25 pounds. Plant during July and August. We have tried seed of the Flat Dutch from different growers, but have found none yet to equal the stock which is raised for us by contract.

The Onion is one of the most important vegetables planted in this section. Thousands of barrels are annually shipped from here to the West and North.

LOUISIANA OR RED CREOLE ONION.

Has been cultivated here for a century—supposed to have been brought here first from the south of Europe, we presume the bulbs produced but few seeds. It is hard to say from what variety this onion originated; having been planted here for so long it has become a distinct kind. It is not as red as the Wethersfield, and not as light as the Strassburg; in flavor it is similar to both varieties, but much stronger than the Italian kinds. In this latitude the seed should be sown from the 15th of September to about the 25th of October; if sown sooner, a good many will throw up seed stalks, which impairs the keeping quality of the onion. We sow the seed broadcast, protect the seed beds by spreading green moss over them, which is removed every evening and replaced in the morning. Some gardeners use lataniers for coving the bed. When the seed is coming up, say in 7 or 9 days, the cover has to be removed entirely; but if the weather is dry the watering has to be continued. They thrive best in loamy soil. Can be planted in the same ground for years, and require no rotation as other crops. When the plants have reached the size of a goose quill they are transplanted into rows, which can be from one to two feet apart, according to the mode of cultivation, and about five or six inches apart in the rows. The ground should be prepared before setting out the plants. We generally shorten the tops and roots. In April the onion will be ready to be taken up. In sections where it is too cold to sow onion seed in the fall, the Creole seed can be sown in January and February; in that case they should be sown very thinly in drills, thinned out to a proper stand, and by the end of spring they will produce good size onions. Growers here use very little, if any, fertilizers, but it can be used with advantage. For spring sowing we recommend the Bermuda seed. The seed of the Creole Onion, which we offer, is grown for us by experienced onion growers. No better stock can be found.

CRYSTAL WAX ONION.

This variety is the best White Onion we have ever seen. It is of a pure white and sells on sight. Should be planted in rich soil; if left exposed to sun after ripening they turn to a greenish color. Excellent for shipping and the finest flavored onion in existence.

The Louisiana Red Creole, White or Yellow, Red Bermuda and Crystal White Wax are the four leading Onions for our Southern States. Many of our readers are, no doubt, familiar with the quality and merits of these onions. The Creole has predominated in this country for 40 or 50 years and still leads, but the Bermuda is getting to be a close second and does very well. It ripens early, nearly two weeks ahead of the Creole, which makes it quite an advantage to the farmer. The Bermuda Onion has made Texas famous and has made many farmers independently wealthy, hence we advise planting this variety largely.

BERMUDA WHITE OR YELLOW ONION.

Extra early, a heavy cropper and the mildest flavored of all onions. Suitable for planting in all parts of the South in the spring. If you want sweetness and mildness in an onion this is the right variety. While usually called White Bermuda, it is really a light straw color. Plant this spring.

RED BERMUDA ONION.

Genuine seed imported direct from the Island of Teneriffe. A very early pale red onion grown extensively in the Bermudas and southern parts of the United States for early shipping to Northern markets. Grown in our climate the bulbs are smaller, but mature early and retain much of the extremely mild, sweet flavor of the imported ones.

We also advise planting Onion Sets, as they will give you onions three weeks or 30 days sooner than if you planted the seed, and the early onions get the price.

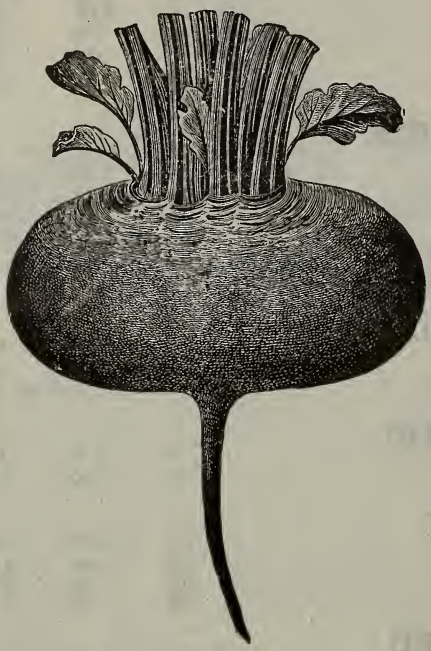
Steckler's Seeds have been favorably known for nearly a half century. Year after year the same gardeners have bought from us. Our reputation has been built on furnishing "Seeds that Grow."



CROSBY'S IMPROVED EGYPTIAN BEET.

More largely planted for early market in the South than any other kind, and has proved a most profitable and satisfactory crop, particularly with our truckers and large shippers to Northern markets. The beet is of very handsome form, good size, small tops and small tap-root, and above all, of very quick and rapid growth. The shape is very desirable, being not quite so flat as the ordinary Egyptian, nor quite as round as Eclipse. It takes on its turnip shape even in very early stages of its growth, a decided advantage both for forcing and early cropping, which accounts very largely for its popularity.

ENDIVE.

Endive is used largely as a salad during the cool fall, winter and early spring months. The leaves have a slightly pungent flavor which somewhat resembles that of the dandelion. The finely cut leaves are quite ornamental in appearance. The plants are very attractive when blanched, so as to show a white or golden-yellow center surrounded with green. This is accomplished by gathering the outer leaves closely together and tying loosely with soft twine or a wisp of straw for a week or ten days in advance of the time you wish to use them.

GREEN CURLED ENDIVE.

Green Curled is the hardiest variety and has deep green leaves, finely cut or fringed. **Giant Fringed,** or **"Oyster,"** is similar in appearance, but grows to a larger size, with longer leaves. **White Curled** is similar to the Green Curled, but the leaves are naturally of a light golden tint and they do not have to be tied up to blanch them for table use.

BROAD-LEAVED BATAVIAN ENDIVE

Is known as **Escarolle** in the South. It has broad thick leaves with rounded ends, much larger in size and not deeply fringed like the preceding sorts. This is used in the natural state as an appetizing and most wholesome salad, and is also used for a boiling-green to be cooked like spinach.

One ounce will sow about four hundred feet of row.

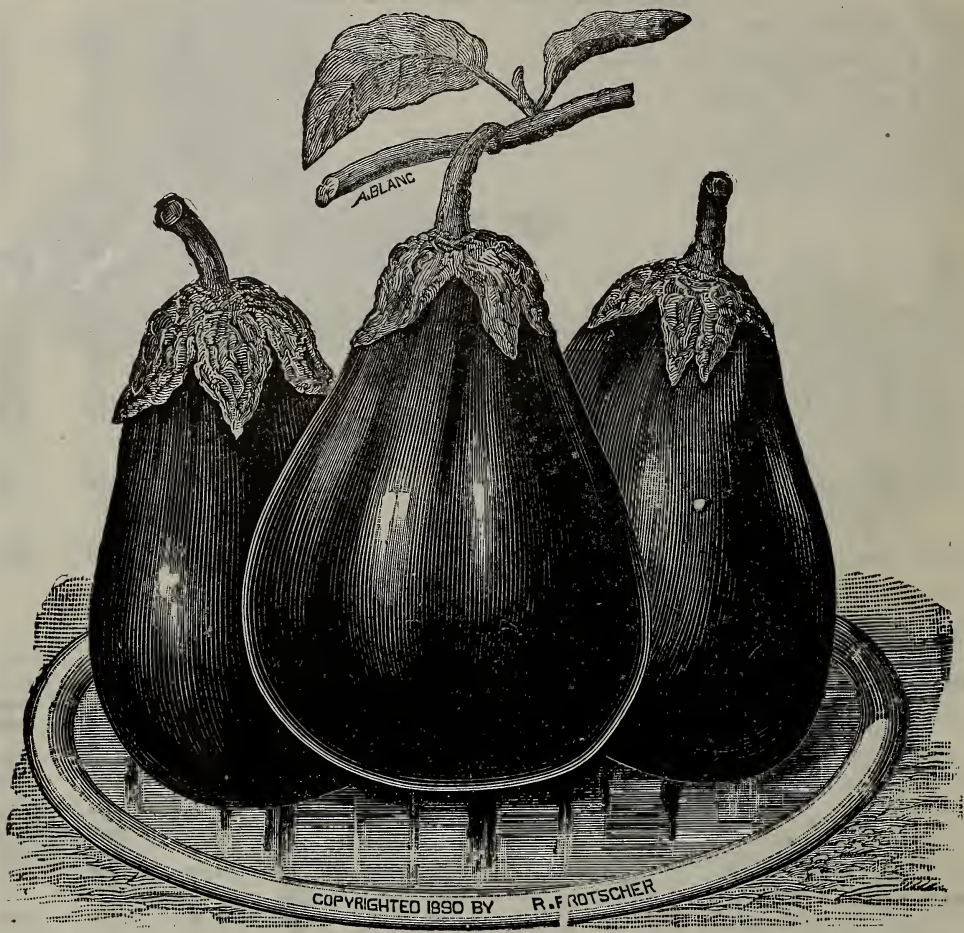
Frotscher's Large Purple or New Orleans Market is the Earliest and Best of all large fruited Eggplants and has been the standard for many years.



LARGE PURPLE OR NEW ORLEANS MARKET EGG PLANT.

This is the kind mainly grown here, is large, oval in shape and of a dark purple color and very productive. Southern grown seed of this, as a good many tropical or sub-tropical vegetables, is preferable to Northern seed, as it will germinate more readily, and the plant will last longer during the hot season. It is the best variety for shipping, superior to the Northern raised kinds. It carries better. The cut is made from three specimens, and represents the true form.

COLLARDS.

These slightly resemble cabbages in growth and appearance, and are largely planted in the South for use as boiling-greens during the winter months and also to furnish green forage for poultry and stock in the winter. The young plants can be started in a seed-bed, and when large enough transplanted to regular rows like cabbage. It forms a mass of leaves on a tall stem, and in the South continues in growth all winter. As the leaves are pulled off, the stem increases in height, bearing new leaves. Two to four ounces should produce sufficient plants for one acre.

Big Boston Lettuce.

BIG BOSTON LETTUCE.

Our strain of this very popular variety is unsurpassed. Thousands of acres of Big Boston Lettuce are grown annually in the South. Plants are large and vigorous, leaves light green, slightly tinged with reddish brown; stands very long before shooting to seed. Can be grown in the open ground, in the spring or fall, or in frames for early spring planting, does particularly well in cold weather and is especially recommended for fall planting in the South. Is very popular with gardeners and truckers, because it always produces large, solid, salable heads; and with private growers because it heads up at all seasons of the year and is of crisp tender quality.

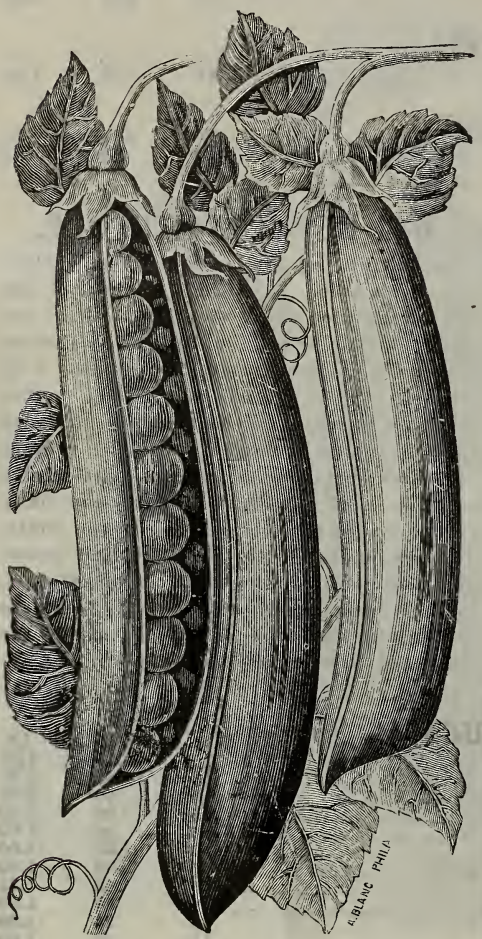
Do It Now! **Putting off ordering seed early ruins thousands of gardens every year. Order now and you will have them sure.**



EXTRA EARLY OR FIRST AND BEST.

Very popular with market gardeners. It is very productive and well flavored. The stock we sell is as good as any, no matter whose name is put before Extra Early.

EARLY WHITE FLAT DUTCH TURNIP.

(Strap-Leaved.)

This is the earliest variety, and can be sown either broadcast or in drills; it is, without exception, the best and most popular sort for either table use or for market; is of a beautiful flat form, of pure white color, and of a delicate, mild flavor; it produces bulbs entirely free from small roots and with long narorw strap-leaves, growing erect, which permits close culture.

LIVINGSTON'S STONE TOMATO.

An excellent variety; one of the best and most desirable for our truck farmers. Thousands of bushel boxes are annually shipped from Florida to Southern and Northern markets, and no variety gives better satisfaction than this. For shipping it cannot be surpassed. The fruit is of the handsomest, brightest scarlet; more globular in shape than the Beauty or Favorite, and perfectly smooth and glossy. One of the best varieties for our climate. Recommended by the Louisiana Agricultural Experiment Station for canning.

FALL IRISH POTATOES.

Fall Irish Potatoes for planting during August, planted whole, not cut, at the rate of 3 barrels to the acre:

IN BUYING, GET THE BEST, EVEN AT HIGHER PRICES. YOU GET RESULTS

RED RUST PROOF OATS.

(Louisiana Grown.)

Standard weight 32 lbs. to the bushel, but frequently these oats weigh as high as 38 lbs., as they very plump and heavy. There are no better oats than the Louisiana Red Rust Proof. They are very prolific and more than 75 per cent. of the oats grown now in the Southern States are oats that were originally brought here by Rev. R. I. Patterson, who settled in Louisiana right after the war. He brought with him some Northern oats and by continually saving the same oats and improving them, he has produced an oat that will resist all diseases year after year. Through this process this oat has been produced to resist the rust, and is known as the Louisiana Red Rust Proof.

Farmers should become posted and be more careful in purchasing seed oats. The Louisiana Red Rust Proof Oats are heavy bearders, but in thrashing, especially if dry, most of the beard is taken off so that very little of it shows. The color varies according to the season. These oats should be planted on thoroughly broken soil. Our strain of oats has been carefully selected from the very best stock obtainable, and from the most vigorous and largest plants.

We have been handling this variety for a number of years and it has given satisfaction wherever grown. These oats are as true and uniform in color, quality, time of ripening and stooling as any oats that can be had. It is without doubt the best variety for Southern planters. While some of our farmers have repeatedly yielded up to 100 bushels per acre, it is safe to say that from 50 to 75 bushels would be an average crop.

Sown in the fall, these oats make a splendid winter pasture, which does not prevent it from making a full crop in the spring. It nearly always stands our winters. It is stated that even a half stand of fall sown oats yields more than a full stand of spring sown oats.

Plant from October first on, at the rate of 2½ to 3 bushels per acre. We consider these oats the best that we have ever seen. Sample of seed will be sent on application.

We could give you a three page description of these oats, but what we have stated are facts.

Price, peck 50c., bushel $1.00., in lots of 50 to 100 bushels 90c. per bushel.

CITRUS TRIFOLIATA.

It has become of great importance as a stock for citrus trees of all kinds. Varieties budded on it are made hardier because of its dormant and hardy character, and the fruit is of exceedingly fine quality, ripening two or three weeks earlier than if budded on other stocks. It has been claimed that it dwarfs the trees budded upon it, but the tests of years in our test groves have not proven this to be so, except in the case of a few varieties. For the Satsuma orange, it is the only stock to use.

This seed is planted in the fall and spring. We find, however, through experience that the seed planted from July 15th does the best, as the seed should be planted as soon as possible after being taken out of the orange; by winter the plants are already 4 to 6 inches high and gives them a fine start for early spring. Price, clean seed, 1 pound, $1.00; 5 pounds, at 90c. per pound; 10 pounds and over, at 80c. per pound. Seed in the fruit or orange, 1 pound, 30c.; in 5 pounds, at 25c. per pound; in 10 pound lots and over, at 20c. per pound.

Sour Orange Seed, single pound, $2.50; in 5 pound lots, at $2.25 per pound; in 10 pound lots and over, at $2.15 per pound.

Sweet Orange and Grape Fruit Seed.—Same price as Sour Orange Seed.

Pecan and Orange Buds of all varieties bred from July to September 1st.

We are pleased to announce to our customers that from September 1, 1914, we will take up the Agency for Cyphers Celebrated Incubators and Poultry Foods and Supplies

The above prices subject to market fluctuations without notice.

RYE (Southern Grown.)

It stools heavily, can be grazed several times and then allowed to go to seed. Cut and feed green, has made as much as 10 tons of green food per acre in five months. Rye grown in Tennessee, Virginia, and the North and West is cheaper, but it is spring sown and often runs along the ground. It is slow growing and is not so good here. It is an entirely different type to our Southern Rye.

Rye is extremely hardy, and will grow on the poorest kind of land. It makes the finest kind of winter and spring pasturage, and if sown early can be grazed until late fall. If cut when in bloom, or before fully headed out, it makes a fair quality of hay, and when used for grain, the straw is excellent for bedding purposes.

It is not truly a soil-improving crop, but makes a great deal of humus, and when turned under on the land, will greatly help impoverished lands. It is sown from the middle of August until November, and then again in the early spring. The main planting time is in the fall, however, as it more valuable when sown early.

It is a very hardy plant, withstanding all kinds of very cold weather without serious injury. The ground should be well prepared before you sow; plant early, thus giving the young plants plenty of time to get a good stand. Sowed both broadcast and in drills. The seed should be covered no more than two inches.

For hogs, sow from September 10th to November 1st, together with crimson clover. Graze from December 1st to April 15th. Rye can be planted for late fall and winter grazing at the last laying by of cotton.

WORTH $100.00 TO EVERY FARMER.

FARMERS' READY REFERENCE BOOK. Contains 192 pages of vital interest to the Farmer, Gardener, Ranchman, Dairyman, etc. Chapters on all departments of farm life, each written by an expert in his particular line.

Send us your order for $5.00 worth of Seeds and a copy of this Book will be sent you Free of charge. The supply is limited. Order to-day.

FALL BEARING STRAWBERRIES.

You can have strawberries just as early in the fall as in the spring by planting the Iowa, Americus and Superb, known as the fall-bearing varieties. These varieties will produce heavy crops in the fall of as fine berries as any spring ripening strawberries. Truly a luxury for home and profitable for market. Think of having all the berries you can use on your table during the months of September, October and November and later if not killed by freezing weather.

If you grow them to sell you can get your own price for the strawberries at that season of the year, and there is no strawberry known that is so prolific as those named above. They commence blooming early in the spring and the blooms should be kept removed until about the middle of August. By doing this you get a larger yield in the fall than you would if allowed to bear all summer. So prolific are they that the young plants that are formed in the summer will bear in the fall of the same year; in fact, the young plants will very often send up fruit stems before they become rooted. They are not a novelty nor an experiment, but are a success, and you can have strawberries as well in the fall as in the spring—strawberries of good quality for your table every day during the late summer and fall, strawberries for Thanksgiving

You should plant some of these—the latest thing in the strawberry world. You will have to do this in order to stay up with the crowd, and you want to do that. The Iowa is the leader and is considered the most successful of all the fall-bearing strawberries, a heavy bearer of splendid fruit and of good quality and size; plants hardy and robust. The Americus is a splendid berry and will please all who plant it. It has good color and shape and fine quality. Superb, another of the best of the fall-bearing varieties, yields a fine quality of fruit. These varieties are all staminate or perfect blooming berries and each will bear planted by themselves. Ready for shipment from October 15th.

Iowa, Americus and Superb—100, $4.00; 50, $2.25; 25, $1.50; 12, $1.00, postage paid.

FARMOGERM

(High Bred Nitrogen Fixing Bacteria) is put up in bottles in the following sizes:
Garden size, containing material to treat the seeds for 1/6 acre of land.....$ .50 each
Acre size, containing material to treat the seeds for 1 acres of land..... 2.00 each
Five acre sizes, containing material to treat the seeds for 5 acres of land..... 9.00 each

For the following crops in acre sizes: Red Clover, Mammoth Clover, Crimson Clover, White Clover, Burr Clover, Sweet Clover, Alsike, Alfalfa, Peanuts, Vetch, Garden Beans, Garden Peas, Sweet Peas, Cow Peas, Canada Field Peas, Soy Beans and all other legumes.

In garden size for Peas, Beans and Sweet Peas; also a mixed culture good for all three. In ordering state what crop you wish to plant; quantity wanted, and ask for book on the

FARMOGERM METHOD.

Plant your Strawberry and Artichoke plants from October 1st. Well rooted plants. Now don't be governed by cheap prices. Get good, strong plants, and true to name, viz: **Plants of all kinds are best sent by express.**

SWEET PEAS.

Culture: Sweet Pea delights in a soil inclined to be clayey, and, as the little beauty is a gross feeder, a good supply of well-rotted manure should be mixed with the ground. Fall is the best season to prepare the soil. A good many failures are caused by manuring in the spring, for the reason that all pea vines like a moist ground, and the heat originated by the manure combined with the heat from the sun is too much for the young vines, which turn yellow and die, The best season to sow the seed is as soon in the spring as the ground can be worked. Late sowing produces rank growth, but few flowers. Dig a trench a foot deep by 16 or 18 inches wide and mix in it 6 inches of top soil with old manure. In this plant your seed in two rows, dropping one every inch or two; then cover with two inches of soil, gradually filling the trench as they grow. One side has to be a little lower to allow the surplus water to drain off. The flowers must be picked every day if you want them to bloom through the summer. Bone dust and nitrate of soda will hasten the time of flowering.

BEST LARGE FLOWERING MIXED.

All Grandifloras and Eckford Varieties.

This is the best possible mixture that can be made from existing grandiflora or Eckford varieties. The colors are well proportioned, and the amount of each variety is determined by a well studied and carefully arranged formula which has been tested and improved upon from time to time for many years. All the newer and best grandiflora varieties are in this mixture. Packet, 5c. and 10c.; ounce, 20c.; ¼ pound, 60c.; 1 pound, $1.35.

Emily Henderson (Pure White).—An early, profuse, and continuous bloomer. Paper, 5c. and 10c.; ounce, 25c.; ¼ pound, 50c.; 1 pound, $1.50.

Winter Blooming Sweet Peas.—Lavender. Mr. Chas. H. Totty. 1 ounce, 25c.; ¼ pound, 75c.

Winter Blooming Sweet Peas. — Light Pink. Mrs. F. J. Dolansky. 1 ounce 25c.; ¼ pound, 75c.

Christmas Blooming Sweet Peas.—White. Mont Blanc. 1 ounce, 25c.; ¼ pound, 75c.

FENNEL FLORENCE OR NAPLES.

(Fennoul de Florence, Finocchio di Napoli.)

Culture: Sow in spring in rows 16 to 20 inches apart. Thin out so as to have the seedlings 5 to 6 inches apart, and water as plentifully as possible. The plant is usually eaten boiled. In flavor it resembles Celery, but with a sweet taste and a more delicate odor. 5c. and 10c. papers; ¼ pound, 50c.; per pound, $1.50.

VEGETABLE PLANTS.

During the proper season we will have all varieties of vegetable plants on hand suitable for our climate, and will be prepared to fill orders on the shortest notice, providing the weather permits.

Due to the very poor condition in which vegetable plants reach destination in early fall, it is useless to ship them until the weather cools, which is after the 15th of October. Any plants shipped prior to this date will be shipped entirely at purchaser's risk.

	Per Doz.	Per 100.	Per 1000.
Artichoke plants, Genuine Globe	$ .50	$2.00	$15.00
Cabbage plants of all seasonable varieties	.10	.60	4.50
Cauliflower of all seasonable varieties	.20	1.00	7.50
Leeks, leading varieties	.10	.40	3.50
Celery plants, leading varieties	.15	.75	6.50
Beet plants, leading varieties	.10	.40	3.50
Lettuce plants, leading varieties	.10	.40	3.00
Kohlrabi, White Vienna	.10	.40	3.50
Creole and Bermuda Onion plants	.10	.25	2.50
Brussels Sprouts	.20	1.00	7.50

For any of the above plants by mail, add 20 per cent. to cover postage.

To grow vegetable plants of any kind, put Kainit on the ground about 6 weeks before the seed is planted, at the rate of 600 to 800 pounds per acre. The above preparation is to avoid cut and ground worms.

RATES FOR SEEDS BY PARCEL POST.

Your postmaster will tell you the parcel post zone in which your postoffice is located, measuring from New Orleans.

All Seeds and Plants shipped by mail takes parcel post rates. Packages up to eight ounces in weight are carried at the rate of one cent for every two ounces, regardless of distance. Packages over eight ounces are charged by the pound. The rate per pound varies according to the distance, which is measured by the Government Zone System, each zone covering a certain number of miles from point of shipment. Distances and rates are shown in the table below. Packages carried by the Parcel Post are handled like any other mail matter. They are delivered to your box by your rural mail carrier if you live on a rural route, or delivered to your door if you live in a city where there is carrier service, or delivered to your local postoffice if you live where there is no carrier service.

In most instances, Parcel Post Shipments are more desirable even if the cost is slightly higher than express shipments, because the package is usually delivered to your box, whereas it is sometimes necessary to drive several miles to the town to get an express package.

No Plants or Live Stock sent C. O. D. by Express.

When ordering write your name plainly, give correct P. O. address if by mail, if by express give your express office or nearest express, to avoid any delay; also if by rail or boat give station or landing, and if possible the name of railroad or name of boat. Where no instructions are given as to how shipment should be made, we will use our own discretion, but we urge all customers to state plainly whether they want goods mailed, expressed, or shipped by boat or by rail.

All C. O. D. orders must be accompanied by at least half the amount.

WITHIN LOCAL ZONE AND ZONES 1 AND 2 PACKAGES UP TO 50 POUNDS IN WEIGHT ARE CARRIED. THE LIMIT OF WEIGHT FOR ALL OTHER ZONES IS 20 POUNDS.

SEEDS POSTPAID BY MAIL IN U. S. ONLY.

Please bear in mind that prices quoted in the following list include prepayment of postage on all seeds ordered by the **packet, ounce, quarter-pound, pound** or **pint.**

If ordered to be sent by express or freight, **deduct 10 cts. per lb.** from **mail** prices quoted.

Larger quantities than **pounds** or **pints** will be sent by express or freight at purchaser's expense. Postage on Bulbs, Flowering and Vegetable Plants, add 25 per cent of their value.

The rate of postage on seeds, plants, bulbs and roots mailed within Alaska, Canal Zone, Guam, Hawaii, Porto Rico and the Philippines is 12 cts. per pound. The maximum weight of a mailable package may now be twenty (20) pounds, and the size seventy-two (72) inches for combined length and girth.

This Company gives no warranty, expressed or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.
